### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert N. Rountree(#39347) on 01/28/2005.

The application has been amended as follows:

Rewrite equation 2 at page 9, line 16 to remove the subtraction operation and add the addition operation as follows:

$$d = \alpha_2 b \text{ [[-]] } \pm \alpha_1 a^* \quad \text{Equation [[1]]2}$$

In Claim 5, Line 3 please add the following:

producing a received block of information having first and second parts from the first and second antenna signals;

In Claim 20, Line 4 please add the following:

communication interface operable for producing a received block of information having first and second parts from said first

2. The following is an examiner's statement of reasons for allowance: The closest prior art document was by Calderbank et al(PAT# 6,430,231). Calderbank et al failed to teach the particular orientation and form of the transmitted blocks shown in antenna paths 10 and 16 of figure 1. Any obviousness argument could not be made since it was shown in figure 9 of the application that the claimed sequencing and conjugation of symbol blocks reduces the probability of error over conventional transmit diversity schemes.
